# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Bridge	
MinecraftProxyEncoder.MinecraftProxyBridge . . . . .	8
ClientFactory	
MinecraftClientEncoder.MinecraftEncoderFactory . . . . .	7
DownstreamFactory	
MinecraftProxyEncoder.MinecraftProxyFactory . . . . .	9
SpawningClientProtocol	
MinecraftClientEncoder.MinecraftClientEncoder . . . . .	5
Upstream	
MinecraftProxyEncoder.UpstreamEncoder . . . . .	10
UpstreamFactory	
MinecraftProxyEncoder.UpstreamEncoderFactory . . . . .	10

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">MinecraftClientEncoder.MinecraftClientEncoder</a>	5
<a href="#">MinecraftClientEncoder.MinecraftEncoderFactory</a>	7
<a href="#">MinecraftProxyEncoder.MinecraftProxyBridge</a>	8
<a href="#">MinecraftProxyEncoder.MinecraftProxyFactory</a>	9
<a href="#">MinecraftProxyEncoder.UpstreamEncoder</a>	10
<a href="#">MinecraftProxyEncoder.UpstreamEncoderFactory</a>	10

## Chapter 3

# Class Documentation

### 3.1 MinecraftClientEncoder.MinecraftClientEncoder Class Reference

Inheritance diagram for MinecraftClientEncoder.MinecraftClientEncoder:

- **pos\_look**
- **spawned**

### 3.1.1 Detailed Description

The MinecraftClient Encoder is a class that represents a Minecraft Client connection and performs the FTE encoding.

### 3.1.2 Member Function Documentation

#### 3.1.2.1 def MinecraftClientEncoder.MinecraftClientEncoder.check\_buff ( self, buff )

Update the buffer if empty by reading from the queue provided by the factory class. Send a player\_look to the server to notify that the encoded packet has finished sending.

#### 3.1.2.2 def MinecraftClientEncoder.MinecraftClientEncoder.check\_entity ( self, data )

Checks an entity if its ID is over 20000. Should be depreciated due to how entity IDs are assigned.

#### 3.1.2.3 def MinecraftClientEncoder.MinecraftClientEncoder.encode ( self )

Encode packet bytes as minecraft movements. Currently just encodes as creative mode inventory actions, but this can be expanded to other movement types.

#### 3.1.2.4 def MinecraftClientEncoder.MinecraftClientEncoder.encode\_inventory\_action ( self, slot\_num )

Injects a byte from the buff as the item id type (currently a subset of all item types) and sets the given window slot <slot\_num>. Finally, it sends the packet to the minecraft proxy server.

#### 3.1.2.5 def MinecraftClientEncoder.MinecraftClientEncoder.encode\_player\_look ( self )

Sends the retrieved players look from the beginning of the game session each time. Currently used to notify when the outgoing buffer has finished sending.

#### 3.1.2.6 def MinecraftClientEncoder.MinecraftClientEncoder.encode\_player\_position ( self )

Encode and send original player's position from the start of the game.

#### 3.1.2.7 def MinecraftClientEncoder.MinecraftClientEncoder.encode\_player\_position\_and\_look ( self )

Not currently used. Bytes can be injected in to the expected fields for the server such as x, y, z, yaw, and pitch.

#### 3.1.2.8 def MinecraftClientEncoder.MinecraftClientEncoder.get\_byte\_from\_buff ( self, buff )

Reads one byte from the queued buffer. If the buffer is empty, the function returns 256.

**3.1.2.9** `def MinecraftClientEncoder.MinecraftClientEncoder.get_bytes_from_buff ( self, buff, num_bytes )`

Get <num\_bytes> out of the given buffer.

**3.1.2.10** `def MinecraftClientEncoder.MinecraftClientEncoder.packet_entity_head_look ( self, buff )`

Extracts a byte from the head angle field of a enitity head look network packet and appends it to the incoming buffer.

**3.1.2.11** `def MinecraftClientEncoder.MinecraftClientEncoder.packet_entity_look ( self, buff )`

Current delienator for knowing when an encoded packet has finished sending from the server. Checks if look movement is from proxy or another player by verifying entity ID. - Currently the ID is hard coded.

**3.1.2.12** `def MinecraftClientEncoder.MinecraftClientEncoder.packet_entity_relative_move ( self, buff )`

Currently not used, but bytes can be encoded into entity's positions.

**3.1.2.13** `def MinecraftClientEncoder.MinecraftClientEncoder.packet_player_position_and_look ( self, buff )`

Receives the inital player position from the server and store the player's information for other turns.

**3.1.2.14** `def MinecraftClientEncoder.MinecraftClientEncoder.update_incoming_buffer ( self )`

When the packet from the client in the incoming buffer (server to client) is fully reconstructed, add it to the recieving queue to be processed.

**3.1.2.15** `def MinecraftClientEncoder.MinecraftClientEncoder.update_player_full ( self )`

Sends a player's position to the server every 20 ticks (1 second).

The documentation for this class was generated from the following file:

- MinecraftClientEncoder.py

**3.2** **MinecraftClientEncoder.MinecraftEncoderFactory Class Reference**

Inheritance diagram for MinecraftClientEncoder.MinecraftEncoderFactory:

## Public Member Functions

- `def __init__`

## Public Attributes

- `forwarding_packet_queue`
- `receiving_packet_queue`

## Static Public Attributes

- `protocol` = [MinecraftClientEncoder](#)

### 3.2.1 Detailed Description

Factory for building Client Connections. Also serves as the interface for the two packet queues for encoded packets being set between the client and server of the Pluggable Transport.

The documentation for this class was generated from the following file:

- `MinecraftClientEncoder.py`

## 3.3 MinecraftProxyEncoder.MinecraftProxyBridge Class Reference

Inheritance diagram for `MinecraftProxyEncoder.MinecraftProxyBridge`:

## Public Member Functions

- `def __init__`
- `def get_byte_from_buff`
- `def get_bytes_from_buff`
- `def check_buff`
- `def encode`
- `def enemy_enc_head_look`
- `def gen_rand`
- `def enemy_enc_look`
- `def spawn_mobs`
- `def update_incoming_buffer`
- `def packet_upstream_creative_inventory_action`
- `def packet_upstream_player_look`
- `def packet_upstream_player_position`
- `def packet_upstream_player_position_and_look`
- `def packet_downstream_entity_head_look`
- `def packet_downstream_entity_look`
- `def packet_downstream_player_position_and_look`
- `def downstream_disconnected`

### Public Attributes

- **clients\_and\_positions**
- **out\_enc\_buff**
- **old\_enc\_buff**
- **mobs\_per\_client**
- **first\_enemy\_id**
- **packet\_done**
- **is\_waiting**
- **block\_len**

### Static Public Attributes

- **quiet\_mode** = False
- **events\_enabled** = False
- **upstream\_factory\_class** = [UpstreamEncoderFactory](#)

The documentation for this class was generated from the following file:

- [MinecraftProxyEncoder.py](#)

## 3.4 MinecraftProxyEncoder.MinecraftProxyFactory Class Reference

Inheritance diagram for MinecraftProxyEncoder.MinecraftProxyFactory:

### Public Member Functions

- def **\_\_init\_\_**
- def **connectionMade**
- def **sync\_buff**

### Public Attributes

- **receiving\_packet\_queue**
- **num\_client\_encoders**
- **num\_waiting\_encoders**
- **out\_enc\_buff**

### Static Public Attributes

- **bridge\_class** = [MinecraftProxyBridge](#)
- tuple **out\_enc\_buff** = bytearray()
- int **num\_client\_encoders** = 0
- int **num\_waiting\_encoders** = 0
- string **motd** = "Proxy Server"

- **forwarding\_packet\_queue** = None

The documentation for this class was generated from the following file:

- MinecraftProxyEncoder.py

### 3.5 MinecraftProxyEncoder.UpstreamEncoder Class Reference

Inheritance diagram for MinecraftProxyEncoder.UpstreamEncoder:

#### Static Public Attributes

- tuple **in\_enc\_buff** = bytearray()
- int **assigned\_enemy** = 0
- int **assigned\_id** = 0

The documentation for this class was generated from the following file:

- MinecraftProxyEncoder.py

### 3.6 MinecraftProxyEncoder.UpstreamEncoderFactory Class Reference

Inheritance diagram for MinecraftProxyEncoder.UpstreamEncoderFactory:

#### Static Public Attributes

- **protocol** = [UpstreamEncoder](#)

The documentation for this class was generated from the following file:

- MinecraftProxyEncoder.py
